

PRODUCT REQUIREMENTS DOCUMENT

Website Rebuild — Requirements

Pavithram Grouppavithram.onlinePrepared for the website development - 18 June 2026

1. Project Overview

Pavithram is a 75-year-old Kerala heritage food brand, exporting oils, ghee, spices, millets and snacks to 25+ countries, based in Aluva, Kerala. The current website does not reflect this scale or trust: it has no pricing, no clear navigation, and a slow mobile experience. This document defines exactly what the rebuilt site must include, in priority order, so the freelancer can scope, quote and build against a fixed brief rather than evolving requirements.

2. Current Website — Problems This Project Must Fix

These were identified in a full digital audit completed 13 June 2026, using Google PageSpeed Insights and manual review. They are the baseline this rebuild is measured against.

Problem Found	Why It Matters
No product pricing shown on any page	Visitors cannot make a purchase decision and leave without converting.
No proper product descriptions	Hurts SEO rankings and buyer confidence in quality and origin.
No navigation flow between sections	Visitors get lost moving between categories and exit early.
No seasonal offers or new arrivals section	Missed opportunity to drive repeat visits and urgency-based sales.
Certifications and achievements not displayed	75 years of trust and export credentials are invisible to new visitors.
Mobile PageSpeed score: 57/100, 23.9s load time	Over 90% of traffic is mobile, and Google ranks sites primarily on mobile performance.
SSL certificate expires 18 August 2026	Past this date, every browser will block visitors with a security warning until renewed.

3. Goals & Success Metrics

- Give every visitor a clear path to either buy online or submit a bulk/export enquiry — neither is currently possible.
- Reach a Google PageSpeed mobile score of 90+, up from the current 57.
- Cut mobile load time from 23.9 seconds to under 3 seconds.
- Make the 75-year heritage, certifications and export reach visible within the first screen a visitor sees.

- Grow monthly organic visits meaningfully beyond the current baseline of roughly 73.

4. Target Audience

- Domestic retail buyers across Kerala and the rest of India.
- Kerala diaspora abroad, particularly in the UK, UAE, USA and the Gulf.
- Wholesale, distributor and export enquiries — a separate journey from retail checkout.

5. Functional Requirements

Core Pages

- Home page highlighting heritage, bestsellers and current offers.
- Our Heritage / About page telling the 75-year story.
- Product catalog organised by category: Oils, Ghee, Spices, Millets, Snacks.
- Individual product pages with full details.
- Certifications & Achievements page (FSSAI, export credentials, awards).
- Export / Bulk Enquiry page, separate from retail checkout.
- Blog / Recipes section.
- Contact and dealer-locator page.
- FAQ page.

Product & Pricing

- Every product must display a price, or a clear 'Request Bulk Quote' option where retail pricing does not apply.
- Minimum of three high-resolution images per product.
- Full descriptions covering ingredients, pack sizes and relevant certifications.

Content, SEO & Communication

- Blog section to publish heritage stories and recipes for organic search.
- Structured data (Product and Organization schema) for rich search results.
- XML sitemap, clean URLs, and meta titles/descriptions on every page.
- Google Analytics and Google Search Console connected before launch.
- WhatsApp click-to-chat button.
- Newsletter signup form.
- Embedded Instagram/Facebook feed on the homepage.

Admin / Content Management

- Non-technical staff must be able to add products, edit prices, and publish blog posts without contacting the developer.
- Ability to update homepage banners and offers independently.

6. Non-Functional Requirements

These are measurable targets, not preferences — please confirm against each one before final handover.

Area	Requirement	Target
Performance — Mobile	Google PageSpeed score and load speed	Score 90+, LCP under 2.5s
Performance — Desktop	Google PageSpeed score	Score 95+
Security	SSL/TLS, admin access, backups	Valid SSL with 30-day expiry alert, 2FA on admin login, daily backups
Compatibility	Browsers and devices supported	Latest 2 versions of Chrome, Safari, Firefox, Edge; iOS and Android
Accessibility	Baseline accessibility	WCAG 2.1 AA basics — alt text, contrast, keyboard navigation
Scalability	Behaviour under traffic spikes	No slowdown during festival promotions or paid ad campaigns

7. Design Requirements

- Mobile-first design, since over 90% of current traffic is mobile.
- Consistent use of existing brand colours (red and gold) and logo across all pages.
- Price and a clear call-to-action ('Buy Now' / 'Get Quote') visible without scrolling on product pages.
- Image placeholders sized correctly in code to avoid layout shift once real photos are added.
- No more than two clicks from homepage to any individual product.

8. Content & Asset Responsibilities

Provided by Pavithram

- Final product list with confirmed pricing for every item.
- Professional product photography (or budget allocated to commission one).
- Certification documents and logos (FSSAI, export certificates, awards).
- Brand guidelines: logo files, colour codes, fonts.
- List of export countries and any existing written content.

Provided by Developer

- Site architecture and wireframes for approval before design begins.
- Full UI/UX design and development.
- On-page SEO setup (meta tags, sitemap, schema).
- Testing across browsers and real devices.
- CMS training session for staff.
- Technical documentation and full credential handover at project close.

9. Timeline & Milestones

Phase	Description	Target Window
Discovery & Wireframes	Confirm sitemap, page structure and content needs	Day 1–3
Design	Mockups for key pages, client approval before build	Day 4–5
Development	Full build of approved design and CMS	Day 5–8
Content & QA	Populate real content, test on real devices	Day 9–10
Launch	Go live, connect analytics, confirm SSL	Day 10

Note: the current website's SSL certificate expires 18 August 2026. If the rebuild is not live by then, the existing site's certificate must be renewed separately as an interim fix — this is non-negotiable regardless of the rebuild timeline.

10. Deliverables

- Fully responsive, mobile-first website matching the approved design.
- CMS access with a recorded or live training session for staff.
- All source files, hosting and domain credentials handed over.
- Basic technical documentation (sitemap, tech stack, how to update content).
- 30-day post-launch warranty period for bug fixes at no extra cost.

11. Acceptance Criteria

The project is considered complete only when every item below is checked off and verified together with the client.

- ☐ Google PageSpeed mobile score is 90 or above at launch.
- ☐ Every product page shows a price (or quote option) and at least three images.
- ☐ SSL is valid and no browser security warning appears.
- ☐ No console errors on any page.
- ☐ Site tested and confirmed working on at least three real mobile devices.

12. Support & Warranty

- 30 days of free bug-fixing included immediately after launch.
- A clear process agreed before launch for SSL renewal reminders going forward.
- Ongoing maintenance or retainer terms, if required, to be agreed as a separate commercial discussion.

13. Sign-Off

By signing below, both parties agree this document reflects the full scope of work for the website rebuild.
